

CAT COURIER

Game Design Document v1 · Game Development Fundamentals · Assignment 8–9 · Sagatova Aizhan, OR1-2

TITLE + PITCH	**Cat Courier.** A little orange cat delivers parcels across the rooftops of a night city, jumps between the houses and collects fish on the way.
GENRE / PLATFORM	2D platformer. Android first (iOS later if there is time). **Landscape**.
2D OR 3D	2D, pixel art. Side view, the camera follows the cat.
CORE LOOP	**Take a parcel → run and jump over the rooftops → deliver it to the door and get fish → unlock the next district → (harder district)**
CONTROLS	• **◀ ▶ buttons** (bottom-left) – move left / right • **JUMP** (big paw button, bottom-right) – jump from roof to roof • **Pause II** (top-right) – pause menu: Resume, Restart, Menu • On laptop for testing: A/D or arrows, Space, Esc
CONTENT	• **3 levels** (districts): 1 Rooftops, 2 Night Market, 3 Construction Site • **Enemies (3):** pigeon (flies left-right), dog (patrols and chases the cat when it sees it), guard dog at the end of level 3 • **Items:** fish (score), milk bottle (+1 heart), the parcel; delivery door = finish • 3 hearts; falling between the roofs costs 1 heart
ART AND SOUND	One style for everything: pixel art, night city in purple and blue with warm orange windows and a big moon, 3-layer parallax background. Orange cat is the brightest thing on screen. UI uses the same orange / purple colours and one pixel font. Art and font are made by me for this project. Sound: calm lo-fi music, meow, jump and fish sounds (free CC0 packs, week 12).
MVP (WEEK 15)	Main menu, pause, 3 levels with a finish door, pigeons and dogs with simple AI, saving of unlocked levels and best fish score, music and sounds, simple effects (dust when landing, sparkle on fish).
CUT LIST	We will NOT make: shop with cat skins · online leaderboard · second character · weather (rain, snow) · day/night cycle · story cutscenes.
PLAN	**Week 9** — GDD, GitHub repo, main menu, HUD, pause, level 1 blockout ✔ **Week 10** — Enemy AI: pigeon patrol, dog patrol + chase **Week 11** — Levels 2 and 3, saving (PlayerPrefs): unlocked levels, best score **Week 12** — Music and sound effects, settings for volume **Week 13** — Effects: dust, fish sparkle, screen shake when hit **Week 14–15** — Team, polish, Android build, store page
ROLES	Solo until week 14: I do code, UI, levels and art. Roles will be split when the team is formed in week 14.

HUD in Device Simulator (iPhone with notch): hearts, fish counter, pause, ◀ ▶ and JUMP inside the safe area.
